The _draw_ tool A color selection or gradation tool that enables the user to draw any area. See Chapter 2 for more on the draw tool. The paint bucket tool A method of applying a fill effect to any shape. See Chapter 6 for more on the paint bucket tool. The marquee tool A tool that enables you to create selections based on any image area, which in turn can be copied and pasted, translated, and resized. See Chapter 5 for more on the marquee tool. The Eraser tool A tool that enables you to remove any color or area of an image. See Chapter 7 for more on the Eraser tool. The clone stamp tool A tool that enables you to clone any areas of any image. See Chapter 8 for more on the clone stamp tool. The magic wand tool A tool that enables you to select any image area, such as a single word, based on a color, pixel pattern, or any number of other options. See Chapter 12 for more on the magic wand tool. All the tools in this list are available in the Options bar. You can adjust the tool's settings with the following buttons: If you click the white arrowhead in the Options bar, the settings of the selected tool are revealed. (See Figure 5-8.) **Figure 5-8:** The Options bar. The buttons next to the opening gradient squares that indicate the effect of the tools are (in order) blur, saturate, desaturate, sharpen, color. They are referred to as the _effects buttons_. You can toggle the effects as desired. Although you can adjust the size of the tool's active area (the box it highlights in a photo), what it highlights is random. All you can do is click outside the area to deselect. In other words, you can't increase or decrease the tool's size because the active area can't be enlarged or decreased. You can also select the type of tool in the Options bar. For example, if you click the triangle next to the Eraser tool, you see choices that are available for that tool (see Figure 5-9). I discuss these tools in detail in later chapters. **Figure 5-9:** Choose the tool to use. Part 3 Photoshop on the Move: Editing with Photoshop Elements Photoshop Elements

Predicting predictors for detecting fall-risk predictors in older adults. To investigate the number of predictors to be assessed, the performance and the risk of overfitting of previously established regression models using falls as a dependent outcome in a sample of community-dwelling older adults. A cross-sectional study with monthly falls measurements over one year in a sample of 587 community-dwelling older persons with a mean age of 80.0 years. Only 2% of the subjects experienced one or more falls. Overfitting was assessed by two criteria: (a) the Goodness of Fit Index (GFI) and (b) the p-value of the significance tests for the regression. The GFI was less than 0.75 for both models. Both models explained 46% of the variance in falls. The p-value of the significance test for the 1-1 2-1-1 model was 0.011 and for the 1-2 1-2-1-1 model, 0.014. Previous studies that suggest overfitting are most likely related to over-fitting with cross-sectional design data.#!/bin/sh -e # Licensed to the Apache Software Foundation (ASF) under one # or more contributor license agreements. What's New in the Photoshop Windows 7 Download Full Setup?

Q: Class of K-equivalent matrices under which diagonals don't vanish Let K be a field and $A,B \in \text{M}_{n\times n}(K)$ ($n\in \mathbb{N}$). I am studying for my final exam for doing linear algebra. To be honest, I feel lost. I have done a small reading on K-equivalent and K-similar and I need help to understand the subject. Definition: A and B are K-equivalent or K-similar if A and B are invertible, and there exists $P \in \text{GL}(n,K)$ s.t. $P^{-1}AP=B$. Definition: For each $1 \leq i,j \leq n$, denote by $R_{i,j}$ the set of K-equivalent matrices in $\text{M}_{n\times n}(K)$ with: ith diagonal entry $= 1$ and jth diagonal entry $= -1$. Definition: For each $1 \leq i,j \leq n$, denote by $Q_{i,j}$ the set of K-similar matrices in $\text{M}_{n\times n}(K)$ with: ith diagonal entry $= 1$ and jth diagonal entry $= -1$. Definition: For each $1 \leq i,j \leq n$, denote by $T_{i,j}$ the set of K-equivalent matrices in $\text{M}_{n\times n}(K)$ with: ith diagonal entry $= 1$ and jth diagonal entry $= -1$. My question: under which class(es) of the four classes above do we have that the ith and jth diagonal entries of A and B are $= 1$? I would be pleased if somebody could explain to me. Thank you! A: T_{ij} are equivalent if and only if $i=j$: indeed, if $A\in T$
